Goodbye, vibrations!

Imagine a world without vibration. It would make your life easier, right? Eliminating vibration in machining completely is not possible. But with our machining tool holders, you can reduce vibration in machining substantially.

Say hello to MAQ's self-tuning mass damper™.

MASS DAMPENING BORING BARS

feature a polymer based technology to instantly tune out vibration when boring at extended lengths. When the vibrations hit the polymer that supports the mass dampener inside the boring bar it changes its properties to tune out the vibration. The leading competitors feature an oil based system which over time breaks down or leaks making the bar less effective.

NEW from

We're excited to introduce **ReMAQ!** The **New Re-Manufacturing Program** for MAQ Tools.

Renew Your MAQ Tools – At Half The Price

" ReMAQ isn't just about reuse, it's about giving your customers more value from the tools they've already invested in. "

While regrounding is common for solid end mills and drills, ReMAQ takes things further by offering re-manufacturing of the tool holder segment – a step towards smarter, more sustainable machining.

Here's how it works:

- End customers pay 50% of the list price for a re-manufactured tool
- Tools must be sent in by the customer
- Even tools damaged due to collisions can be accepted in the ReMAQ program
- Re-manufactured tools will be clearly marked, with updated packaging
- The program is available for the remainder of 2025

Machining for Defence and Medical Industries Where Precision Matters Most!

✈ Defence Industry, Where Failure Is Not an Option

As global defence demands surge, the standards for machining are climbing just as fast. Extreme conditions and zero-tolerance performance leave no room for compromise. That is where MAQ's STMD™ technology rises to meet that challenge.

🏥 Medical Industry, Meeting High Demands

Surgical tools. Bone screws. Tiny, intricate parts with zero tolerance for error. In the medical industry, even the smallest imperfection can have big consequences. With the smallest vibration-damped tools on the market, MAQ enables precision machining even in small geometries.

NEW Product Release

New STMD™ Milling Tools: Twice The Performance, Zero Manual Tuning

Here is the major innovation: MAQ's first-ever monoblock milling tools. Built on our patented STMD™ technology and enhanced with a dual-damping design. This combination delivers stable, high-performance milling with up to twice the productivity in demanding 6xD applications.

- ✓ Real-time vibration damping – no tuning
- ✓ Dual-layer design for extra stability
- ✓ Up to 3mm depth of cut in slotting – double that of leading tools

Watch this 2-minute demo and discover the difference you can both see and hear: clean cuts, high stability, and the unmistakable quiet of vibration-free machining. Whether you're aiming for a better finish, higher output, or longer tool life, this is where performance begins.

Achieve a Mirror-Like Finish with MAQ Diamond Burnishing

Looking to improve surface quality and reduce post-processing? MAQ's Diamond Burnishing Tools provide exceptional finishes, enhanced hardness, and increased corrosion resistance – all while using a standard turning machine.

- Achieve $Ra < 0.4 \mu m$ (16 pinch) for a brilliant, polished surface
- Extend tool life and reduce friction
- Suitable for most metallic materials and various applications

Expanding Our Portfolio

To maintain our leadership in the market, MAQ is excited to expand our diamond burnishing lineup with four new products. These tools cover diameters of 12 mm (1/2 inch) and 16 mm (5/8 inch) for hole sizes of 16 mm (5/8 inch) and 20 mm (3/4 inch), respectively.
